LANGUAGES

Spanish	native
English	C1
German	B1

SKILLS

Security
Cybersecurity & forensics · Vulnerability assessment · Security audits · Risk & compliance

Languages & development
Python · Java · C/C++ · Bash · TypeScript · Full-stack web

AI & data
Machine Learning · LLM integration · SQL & NoSQL · MariaDB · MongoDB

Cloud & ways of working
AWS · Docker · REST APIs · Effective communication · Proactive team player

EDUCATION

B.Sc. Software Engineering — Cybersecurity specialization
U-TAD, University Center of Technology and Digital Art · Madrid (2022-2026)
Bachelor's Thesis: **CVE Intelligence Analyzer** — 9.65/10 (~ 3.9/4.0 GPA)

International Baccalaureate (IB) Diploma
IES Do Castro · Vigo (2020-2022)

RUBÉN RÍOS YÁÑEZ

software engineer · security + AI

PROFILE

Software Engineer, recently graduated from U-TAD with a specialization in cybersecurity and hands-on experience in vulnerability assessment at PwC and applied machine learning in industry. I like working where security, data and product meet: automating workflows with ML and LLMs, and turning raw APIs into tools people actually use every day. Solid foundation in full-stack development and cloud infrastructure; driven to ship things that are secure by design and useful from day one.

EXPERIENCE

Cyber Security Consultant (part-time) 10/2025 - 11/2025
PwC
Assisted in vulnerability assessments, security audits and risk management for corporate clients. Supported the cybersecurity team analyzing threats, ensuring compliance and drafting technical reports to mitigate risk and protect sensitive data.

Junior AI Developer 05/2025 - 09/2025
Event-tech startup · confidential
Developed and integrated machine learning models and LLMs to automate processes and optimize company workflows. Worked with the engineering team on data processing, model training and deployment of AI-driven software.

Event Network Specialist 05/2024 - 09/2024
Wifi-revel
Managed network infrastructure and connectivity for live events: deployment, configuration and troubleshooting of routers, switches and access points to keep internet access secure and available for high volumes of users.

LATEST PROJECT

Commercial Intelligence Platform on the Holded API
Full-stack application built for an event-ticketing company (under NDA) on top of the Holded ERP API. It automates invoice management and turns raw billing data into sales intelligence, so the commercial team knows exactly which event clients to contact, when, and why.

- Automated invoice ingestion and sync through a rate-limited Holded API client
- Client dashboards: rankings, KPIs and revenue analytics per event organizer
- Follow-up queues and alerts that tell sales reps who to call next
- Deployed with Docker behind nginx; 31 automated backend tests

Python 3.12 · FastAPI · SQLite · httpx · React 18 · TypeScript · Recharts · Docker

PERSONAL PROJECTS

CVE Intelligence Analyzer 2026 · Bachelor's Thesis · AI-driven security tool
My Bachelor's Thesis: a vulnerability analysis system using machine learning (Random Forest) and NLP to predict CVE exploitation probability. Automated data pipeline from NVD, Exploit-DB and GitHub, with a custom scoring model that outperforms standard CVSS for Blue Team prioritization.
Thesis grade 9.65/10 (~ 3.9/4.0 GPA) · 82% accuracy · Python · Scikit-learn

Cloud-Native Modular App 2025 · cloud architecture
Microservices-based application designed and deployed on AWS, with containerized services and REST APIs communicating across the stack.
AWS · Docker · EC2 · RDS · REST

Battle Royale Game 2024 · game development
Complete video game programmed in Java, applying advanced object-oriented design and state management.
Java · OOP · state machines
